

Northwind Cloud - Production Deployment Policy

Deployment windows

Production deployments are allowed Monday to Thursday between 09:00 and 16:00 IST. Deployments on Friday after 12:00 IST, on weekends and on public holidays are not permitted unless they are an emergency fix for an active SEV1 or SEV2 incident approved by the Incident Commander.

Change freeze

A company-wide change freeze applies from 20 December to 3 January every year, and during the 48 hours before a major customer launch. Only emergency fixes may be deployed during a freeze.

Approvals

Every production change requires one approving code review from an engineer who did not author the change, a green CI pipeline, and a linked ticket. Database schema migrations additionally require approval from a member of the Data Platform team.

Rollouts and rollback

All services are deployed with a canary release: 5% of traffic for 15 minutes, then 50% for 15 minutes, then 100%. The deploy is automatically rolled back if the error rate rises above 1% or p99 latency increases by more than 20% compared with the previous version. Every change must have a tested rollback plan; destructive migrations must be split into expand and contract steps.
